2 preset speed function	Press button 1 or 2				orange
Stand-by	pull				green
Switch off	Away briefly				off

General directions

John Gold recommend that the GoldCruise remains off when not in use.

The resume function can be only used in case:
- The driving speed is over 40 km/h
- The ingnition has not been switched off in the meantime
- For GC90(c) there has not been a mode change between cruisecontrol and limiter.

Cruisecontrol directions

The GoldCruisecontrol will disengage when:
- Depressing the brake pedal
- Depressing the clutch pedal (if connected)
- Operate the II or ⏻ function
- Speed reduction of 25% below the set speed
- Speed increase of 50% over the set speed
- Switching off the car ingnition
- The brake fuse blows
- The brake lights bun out
- Do not activate the Goldcruise if the car is in neutral or the clutch pedal is depressed
- It is recommanded not to use the Goldcruise in heavy traffic or during bad weather
  A cruisecontrol does noet apply the brakes! In case a drastical speed reduction is required, apply the brake pedal
- It is always possible to accelerate by foot while cruising. After releasing the pedal the car will resume to the previous set speed, unless the speed has been over 50% of the set speed

Speed Limiter directions

The GoldSpeedLimiter (GC90, GC90c) can be used in 4 different configurations (GC90, GC90c):
1. Fixed top speed (limit)
2. Voluntary / variable limit
3. Combination of fixed and voluntary limit
4. Acoustic warning

The voluntary speed limiter will desengage when:
- Operating the II function
- Switching ⏻ function
- Switching off the car ingnition
- Releasing and quickly pressing the accelerator pedal
